## IMPRESSIVE PACKAGING SOLUTIONS

The patented vQm vacuum system is a simple, but most effective method to pack commodities in high barrier liners under vacuum condition, in any size you want!

In this way, optimum preservation conditions can be created, extending shelf-life and ensuring optimum protection.

A UNIQUE PATENTED VALVE

AND IMPRESSIVE LITTLE MACHINE

### THE VALVE

The patented vOm valve allows you to create and maintain vacuum conditions inside the bag at an amazing speed, 500 litres to 500 hPa in under 17 seconds! Flushing with external gas for Modified Atmosphere Packaging (MAP) is also possible. By doing so, insects can be killed in all life stages, without using chemicals. Due to it's filter medium, powders can be vacuum packed as well.

### **ENDLESS APPLICATIONS**

vQm liners can be used in combination with outer protections like cartons, octobins, big bags, crates and bins. Or you can use them to protect exsting small bags for internal storage, by placing them in a vQm liner: Bag-in-Bag. Due to the high speed and simplicity of the system, it is easy to integrate into your existing production process and/or logistics.

### **ADVANTAGES**

- + Any size up to 2.000 liter
- + Extended shelf-life
- + Stable moisture content
- + Avoid mold and fungus growth
- + Insect treatment possible
- + No re-infestation of insects
- + Reduced breakage
- + Retains flavors, aroma's and color
- + Lower storage cost
- Less investment in warehousing
