

HOOD LINERS

WRAP/GAS/PRESERVE

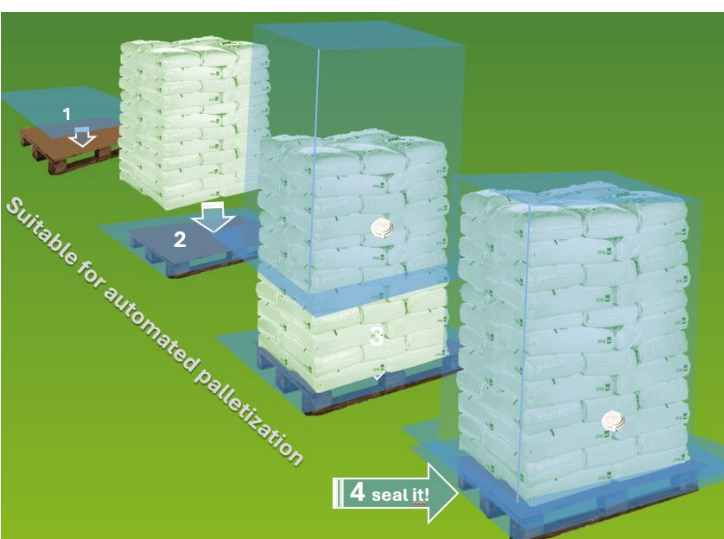

Hood liners allow you to wrap pallet-size stacks and are supplied in two parts: i) a bottom sheet and ii) a hood that goes over the stack. After sealing the bottom sheet to the hood, the stack is packed hermetically and the internal atmosphere can be modified in combination with the vQm HS or XL machine. This allows you to quarantain your incoming goods, eradicate infestations inside (if needed) and avoid moisture, oxygen, smell or other external conditions to spoil the quality of your product.

Hoods are typically used to:

- Eradicate infestations by (preventive gassing with CO₂); also suitable for organic products
- Avoid reinfestations
- Keep optimum moisture content
- Avoid oxidation or rancidity
- Stop bacterial developments
- Keep the product & your warehouse clean
- Avoid smell or aroma's to effect the product

Standard hoods are made from an extreme, 7-layer barrier film (PA/PA/EVOH/PA/PE), 200μ thick with supreme elongation, puncture resistance and easy to seal.

Available for Euro (80x120cm) and Industrial (100x120) pallets. Bottom pieces have an excess of 19cm on all sides of the applicable pallet (118x158cm or 138x158). The hoods have an excess of 8cm compared to the pallet's circumference (so 408cm or 448cm).
