

VQM IMPULSE SEALER **SEALED TO PERFECTION**

The combination of the generator together with impulse tong is a mobile and easy to handle sealing unit. The sealing impulse is produced in the generator and the sealing is done with the sealing tong, which is connected to the generator.

The sealing tong is heated on both sides so that also thick films can be sealed. Thermoplastic films of 2 x 0,025 up to 2 x 0,4 mm (PE) can be sealed with this equipment. The sealing pressure is achieved by a built-in spring, so that the pressure and the quality of the sealing is always equal. The sealing tong can be used for sealings at the edge of the film-material.

Technical specifications

Sealing length	280 - 630 mm
Sealing width	3 mm
Power supply	230 V
Weight Tong	1,5 - 2,1 kg
Cable length	5m

PORTABLE SEALING SOLUTION
