

Handheld, controlled Impulse Sealer

SEALED TO PERFECTION

To maintain modified atmosphere packaging conditions over an extended period of time, a leak-proof seal is critical. For complex seals that do not simply involve two layers of plastic (e.g. due to gussets, wrinkles etc.), a regular, time-regulated impulse sealer will often not give the desired, reliable results.

vQm developed this special, handheld version of a temperature & cooling-down controlled impulse sealer. The result is a handheld mobile sealer (with 2.6m long cable between generator & seal bar) that can match the performance of fixed, industrial, fully controlled impulse sealers, at a fraction of the cost.

**CONSISTENT &
RELIABLE SEALS**

VACUUM-PROOF

MOBILE

Seal length	: 400mm, double-sided impulse heating
Seal width	: 3mm wide
Temp range	: ≤ 250°C
Seal/cooldown	: max. 10 seconds
Seal pressure	: adjustable actuator for min. seal pressure to be applied during seal process
Power	: 200~230V 50/60Hz
Weight	: 16 kg

The sealer comes with a maintenance set (wear parts) for the seal bar and a wall-mount for safe storage.
